

Paid 6-Month Web3-Solana Internship in San Francisco

For talented developers with a passion for building real-world applications and a desire to gain hands-on experience in the US tech scene. This is a full-service placement for a paid J-1 internship, professionally managed by Marcellus Bartsch.

The Opportunity:

A San Francisco-based development shop is looking for a programmer to join their team for a 6-month, paid J-1 internship. You will work on building custom Web3 applications from the ground up.

The Role:

- Develop custom web and mobile applications using a modern tech stack.
- Work directly with clients and senior developers.
- Focus on the Solana ecosystem, as well as Node.js, Typescript, and databases.

The Ideal Candidate:

- A student or recent graduate in Computer Science or a related field.
- Demonstrable passion for programming that goes beyond university coursework (e.g., personal projects, GitHub contributions, hackathon participation).
- Specific interest or hands-on experience in Web3, Blockchain, or Solana is a massive plus
- Proactive, a fast learner, and genuinely enjoys solving complex problems

The Offer:

- Remuneration: \$2,000 per month.
- Location: San Francisco, USA.
- Duration: 6 months.
- Visa Support: This is not just a job offer; it is a full-service placement. The entire J-1 visa application process, including the creation of the training plan (DS-7002) and sponsorship, will be fully managed to ensure a smooth transition to the US.

How To Apply

Interested candidates should send a brief, informal email explaining their interest in Web3 and this specific role, along with their CV or a link to their GitHub/LinkedIn profile, to:

contact@marcellusbartsch.de

Applications will be reviewed on a rolling basis.
